

Duplex Silent Chains

Advantages

Duplex chains are designed to engage and drive sprockets from both sides of the chain. Ramsey manufactures three different styles of duplex silent chain; each has unique features and advantages:

SC Duplex

SC duplex chains are often the most economical option and are used primarily in replacement applications. SC duplex offers the advantage of reduced weight, but with a lower power capacity.

Rampower Duplex

Rampower duplex, also known as RP duplex, provides approximately two times the power capacity of SC duplex chain. RP duplex is often well suited for applications where power or speed requirements exceed the capability of SC duplex chain.

Ramflex

Ramflex is Ramsey's most robust duplex chain and is particularly well suited for applications which are exposed to shock or very high loads. It is also a good option where drive space is limited. Ramflex directly interchanges with chain produced by some European manufacturers.

Ramflex

Ramsey Offers More Duplex Silent Chain Options

Options

- Available in 3/8, 1/2, and 3/4 inch pitches
- Chain widths from 1 to 6 inches
- Sprockets made to exact customer requirements
- Many different chain assemblies
- Free drive selection assistance
